

FOR IMMEDIATE RELEASE:

Zenair Ltd. re-established as the official representative for Chris Heintz designs in Canada.

Midland, Ontario, Canada – Zenair Ltd., a pioneer in the Canadian light aircraft kit industry, has been re-established as the official Canadian representative for Chris Heintz kit aircraft designs. Aeronautical engineer Chris Heintz founded Zenair Ltd. in 1974 to manufacture aircraft kits and components for the burgeoning market for “homebuilt aircraft” and over the years has designed more than 20 aircraft models for the sport aviation marketplace. In 1992, Zenith Aircraft Company was formed in Missouri to manufacture and market Chris Heintz kit aircraft designs from its central U.S. location. The company currently produces kits for the popular high-wing STOL CH 750 and the sleek low-wing CH 650, as well as earlier models such as the STOL CH 701 light sport utility kit plane.

Zenair Ltd. will benefit Canadian customers in numerous ways as the Canadian dealer for Chris Heintz designs in Canada. Zenair stock complete airframe kits at its factory in Ontario, as well as section kits and individual parts and components to better service the hundreds of Canadian builders across the country. “In-stock parts means better service and support to our customers in Canada,” explained Mat Heintz, vice president of Zenair Ltd. “Customers can now pick-up their kits at Zenair which can easily save more than \$1,200.00 in crating and shipping charges, not to mention the hassles with importing a kit through customs.”

Zenair Ltd. replaces Can-Zac Aviation Ltd. for Zenith Aircraft kit sales and service in Canada, though Can-Zac Aviation will continue to offer onsite builder assistance and Canadian Advanced Ultralight quick-build assemblies: “We help customers to finish their kits in record time at our facility and assist them with professional builder assistance,” states Mark Townsend, owner of Can-Zac Aviation Ltd. “We can now focus all of our energy on building and flying.” Mark Townsend is well known among Zenair aircraft owners.

Zenair Ltd. has been actively producing the complete kits for the four-seat Zodiac CH 640 (a low wing based on the certified CH 2000 designs) and the four-seat STOL CH 801, a utility high-wing aircraft, from its production facilities in Midland, Ontario. Zenair also manufactures and markets a complete line of lightweight all-metal floats for light aircraft, which are sold in kit form or factory-assembled and available as straight floats or in amphibious versions. Zenair Ltd. typically employs a skilled workforce of 15 to 20 staff for the manufacturing of parts and assemblies which are shipped to customers around the world.

For more information on the Zenair Ltd. and the light aircraft designs it represents in Canada, please contact Mr. Mathieu Heintz at Zenair Ltd.
